**Need QUALITY?
Call METFAB!**

Recent **METFAB** photos of some of our scaffold parts & their projects can be seen here at the left.

These were largely for two recent mass transit stations (in Newark & Philadelphia) in which we not only fabricated stairways, but provided miscellaneous metal clips, shims & other needed components. These well illustrate the fact here at **METFAB** that, while we do not presently mass-produce generic scaffold parts, we have experience and skill to fashion the parts needed after you get your rented or purchased scaffolding from national (& international now) scaffold manufacturers. As anyone who has had to comply with project specs or local codes knows, the off-the-shelf scaffolding most often cannot be fitted to particular project requirements, usually in order to fasten the equipment to the rising structure, make it movable from place to place or just fit it into the small space allocated or available. **METFAB** can fill ALL those 'gaps'; do it quickly; and deliver on-site. We have this experience.

We did such things at the University of Virginia, the Borgata Casino in Atlantic City, the NJ Transit station in Newark & the mass transit hub in Philadelphia.

Soon we will report our new venture into doing allied fabrication with large concrete foundation forms. Keep your eye on our eNewsletter in coming months.

Metal Solutions For Building Envelopes
